9 exercises

1 exam

Course Recommended for:

Extension Developer

Automation Specialist

Test Architect

Test Manager

Test Analyst

Course Outcome

Upon completion of Automation Engineer Level 2, you'll be able to create customizations for Tricentis Tosca that will enable you to steer specific custom controls in your application.

This course will teach you the skills required to create Special Execution Tasks (SETs) that extend Tosca's out-of-the-box capabilities. These skills will allow you to increase automation coverage in your test portfolio by creating solutions to automation challenges.

Course Outline

Introduction to Special Execution Tasks (SETs)

Implementing SETs

Debugging SETs

Understanding the layer concept for customizations

*Knowledge of C# is required for this course
