

Tricentis LiveCompare

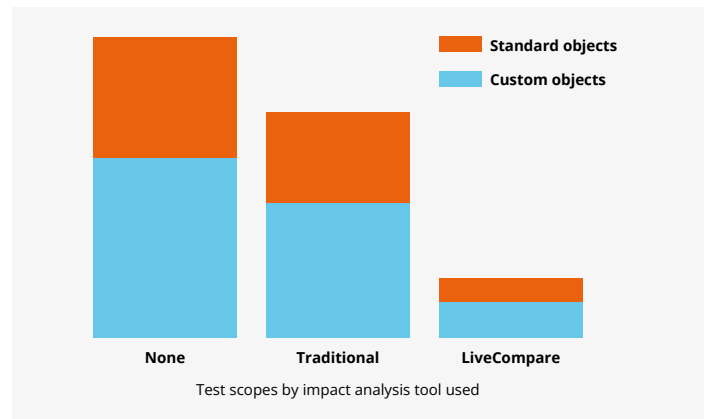

AI-powered analytics and insights significantly reduce risk, time, and cost of delivering changes to SAP solutions.

The problem

Navigating the intricacies of your testing landscape amid SAP migrations poses challenges in pinpointing the right objects for testing. The absence of an impact analysis tool hampers your organization's ability to streamline efficiency, enhance speed, and optimize business flow.

Solution

LiveCompare makes it easy for your team to deliver your digital transformation goals with guides developed with SAP Activate in mind to show teams which quality activities to perform and when.

Tricentis LiveCompare reduced [testing scope by 84%](#)

About Tricentis LiveCompare

LiveCompare eliminates the uncertainty associated with test selection by providing precise insights into the testing requirements before deploying changes to production. By consistently monitoring SAP delivery pipelines and production systems, LiveCompare identifies potential issues that could jeopardize your SAP projects. Leveraging Risk AI technology, LiveCompare swiftly informs you about alterations in your SAP system, highlighting areas that require immediate testing. Its DevOps-friendly capabilities not only enhance quality but also accelerate deployment speed within your SAP practice. LiveCompare empowers you to expedite releases, optimize operations, and execute transformations with confidence, seamlessly integrating with Tricentis Tosca.

Key Capabilities

Know Exactly What's Changed

Release Assurance: LiveCompare finds dependent objects that may cause errors when custom transports are imported from QA into a production environment, minimizing downtime, and maximizing productivity.

Code Watch: Custom code is a main factor of nearly every business that uses SAP, and LiveCompare monitors and analyzes the quality of custom ABAP code, helping developers commit quality code, every time.

Compare Objects: LiveCompare ensures SAP systems stay synchronized by identifying where key source objects (or their dependencies) are out of sync.

Know the Impact of Changes

Change Impact Analysis: LiveCompare uses AI powered analytics to identify the SAP objects that are put at risk from a transport, support pack, or ChaRM change request, further reducing risks to your company's essential processes and reputation.

Continuous Developer Impact Analysis: LiveCompare instantly detects ABAP code changes in your SAP systems and executes ABAP unit tests, code quality checks, and impact analysis against them, helping developers release higher-quality code faster.

Continuous Configuration Analysis: LiveCompare automatically finds and reports configuration-related changes to your SAP systems, identifying data changes affecting configuration and master data while providing precise functional testing guidance.

Continuous InfoSec Impact Analysis: Automatically detects and reports security-related changes to your SAP systems, identifying impacted roles and capabilities before they threaten productive systems and interrupt vital business processes.

Know How to Accelerate Transformation

Smart Project Guides: Smart project guides help SAP customers accelerate and de-risk innovation for a variety of SAP scenarios by taking all the guesswork out of what quality-related activities should be performed, by role, at each stage of a project, from planning all the way through production.

Role-Based UI: LiveCompare's role-based UX ensures that users can quickly find the reports, real-time analytics, and activities relevant to their role whenever they open LiveCompare.

Business Outcomes

- Release to market faster and more efficiently by testing the most important objects rather than the entire suite every time
- Continuously maintain quality in development systems
- Release with confidence by performing ad-hoc analysis when problems occur
- Gain full visibility of what objects are affected

Customer proof points

"LiveCompare ensures we're testing the right things and spending resources in the right places," said their SAP application development lead. "When developing a regression test plan, the data received from LiveCompare allows us to more accurately tailor each plan to an individual release. Instead of testing everything we test only what's impacted. That has translated into a direct resource savings of **30-40%**."
