Tricentis

Oracle testing solutions from Tricentis

Modernize faster. Reduce the risk of change. Accelerate exceptional outcomes.

Product overview

Our automated testing tools are designed for Oracle, with built-in automation engines for Java, EBS, and Fusion. They work across Oracle on-prem and cloud applications, helping businesses digitally transform at speed and scale. Our Oracle solutions include these powerful tools: **Tricentis Tosca** for robust test automation, **Tricentis qTest** for unified test management, **Tricentis Data Integrity** for maintaining decision-grade data, and **Tricentis NeoLoad** for continuous performance testing.

As an Oracle partner, Tricentis' AI-driven solutions help our joint customers achieve their business goals with confidence by standardizing quality across the Oracle ecosystem – and beyond.

With our tools, your teams can:

Keep pace with Oracle Cloud releases

Once organizations move their Oracle instances to the cloud, they'll have to modify their quality strategy to keep pace with the new environment's mandatory quarterly updates. These features can help companies comply with Oracle's release schedule:

- **Intelligent test automation:** Our solutions are designed to enable automation from day one on staging environments, increasing both test speed and coverage.

- **Fast, resilient, and risk-based testing:** Our tools ensure your critical end-to-end business processes will continue to work as expected after Oracle Cloud updates go live.

- **Native support for Fusion apps:** By using Oracle's unique JavaScript framework (ADF) to identify objects, our built-in Oracle Fusion automation engine empowers users to achieve more effective and resilient automation, even for the most complex objects.

Maintain the quality of your legacy Oracle applications

Legacy Oracle applications are vital to many companies' digital infrastructure – but they often come with tremendous risk and steep support costs. Together, our technologies help companies lower spending and increase application stability through these features:

- **Codeless test automation:** No scripting knowledge is required to achieve automated functional or performance testing.

- **Reusable test assets:** Test assets created for your on-premises Oracle apps can be reused in the cloud, reducing 'brain drain', preventing duplicate work, and lowering the effort required for UAT.

- **Accurate performance testing:** Optimize the amount of Oracle hardware used and prevent excessive database spending in your environment with fast, scalable performance testing.

Migrate to the cloud with confidence

Our tools can help enterprises run smoothly and minimize disruptions while migrating their on-premises Oracle applications and data to the cloud, using these capabilities:

- **Business process testing:** Test end-to-end processes that extend beyond Oracle and across on-premises and cloud environments to maintain business continuity.

- **Data integrity testing:** Verify the accuracy of your data as it travels between source systems and data warehouses to reports, dashboards, and business processes.

- **Test management and orchestration:** Ensure your developers, testers, and business users stay aligned on quality objectives and rapidly address issues before, during, and after the migration.

Key benefits

10X
faster

40%
lower cost

90%
risk coverage

Accelerate release cycles
Leveraging artificial intelligence and the efficiencies of the cloud, you can accelerate software delivery by reducing test cycle times by 10X.

Automate and reduce costs
Eliminate error-prone manual testing and achieve automation rates >90% to reduce costs 40%. Free up resources for for more meaningful work.

Improve software quality
Boost release confidence and obtain business risk coverage >90%. The quality of your software goes up. The stress of your day goes down.

We're a trusted Oracle partner

Tricentis is a member of the Oracle Partner Network, helping teams across the globe deliver Oracle projects on time and under budget. We help our mutual customers worldwide accelerate digital transformation by increasing software release speed, reducing costs, and improving software quality through our codeless, AI-powered testing portfolio.
