Phases and key outcomes in TIM

- **Discover:** Gain understanding of current state and project scope, laying the foundation for subsequent phases. The outcome of this phase is a Roadmap, which provides a detailed overview of your current state, desired future state, and the required steps.
- **Plan:** Develop initial Project Plan and Playbook, securing stakeholder support and finalizing project governance. The Project Plan outlines implementation tasks, resources, and dependencies. The Playbook offers custom documentation for your target operating model.
- **Build (Setup):** Install and configure Tricentis technology, enable a pilot team, and establish the foundation for subsequent activities.
- **Build (Establish):** Elevate continuous testing, validate the Playbook through the Lighthouse project, and prepare for scalability. At this stage, customers have a tangible, repeatable adoption model.
- **Scale:** Facilitate integration of new teams, stabilize QA processes, and transition from project to operation. Solutions are rolled out and adopted across the organization with a focus on continuous improvement.

Benefits of TIM

- **Streamlined implementation:** Clearly defined processes and tasks tailored to your needs
- **Reduced time-to-value:** Incremental approach delivers rapid success and adds value continuously throughout implementation
- **Optimized resource planning:** Efficient allocation of resources and clear project milestones
- **Scalable solutions:** Designed to scale as your organization grows and evolves
